WE ALL know growing mums for the wholesale market for profit requires careful planning beforehand. The cuttings should be made at the proper time; and you should be able to take the required number at one cutting, or at one time. Planting a variety because you happen to have the stock plants is not good business when it does not fit in with the varieties selected in your carefully laid plans. This is one move that helps to reduce your margin of profit.

Possibly, due to the pressure of other work, you have lost a portion of your stock plants which usually happen to be your better varieties, or you neglected to keep your crop clean. Then, after considerable spraying you clean it up only to find that by so doing you have hardened the plants to the extent that they do not readily start, and then in most cases you probably wind up buying the stock you need, or a large portion of it.

It is, of course, a debatable question whether it pays to buy all your stock. Each year more and more growers feel that it does for the following reasons.

The specialist, who grows mums only, is constantly on the alert for insects. He is always improving varieties by careful rouging to build up the type and color; and is fighting the many diseases mums are susceptible to along scientific lines with trained plant pathologists. His business is growing mums only, and he always takes the cuttings at the proper time.

By buying from the specialist you can plan your crop to exactly fit your requirements. If your order is placed at the proper time you are reasonably assured of delivery on the date you wish to plant the stock, and because of this you can eliminate at least one operation by planting directly to the bench.

SCHEDULE OF RATES

The prices per 100 and per 1,000 appear opposite each variety in the catalogue.

250 of a variety will be billed at the 1,000 rate.

If order totals 1,000, 25 of a variety will take the 1,000 rate.

If order totals less than 1,000, 25 of a variety will be billed at the 100 rate.

More than 25 of a variety must be in multiples of 25.

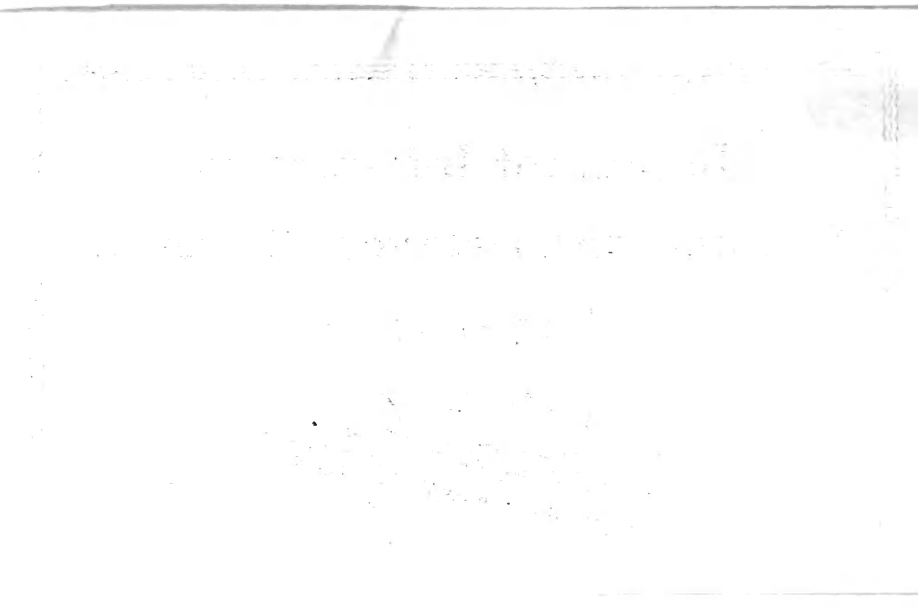

Any quantity less than 25 will take the 10 rate.

Below are listed the rates per 10 corresponding to the respective rates per 100.

Rate per 100	Rate per 10	Rate per 100	Rate per 10	Rate per 100	Rate per 10
\$3.00	\$.50	\$6.00	\$1.00	\$10.00	\$1.50
4.00	.50	7.00	1.25	12.00	2.00
5.00	1.00	8.00	1.50	15.00	2.50

NOVELTY CHRYSANTHEMUMS

ALAMEDA

Incurved early commercial variety producing medium sized blooms. Color medium bronze, somewhat darker than Detroit News. Very strong stem and good foliage. Plants attain a medium height. This variety matures October 25th and gives best results from late grown or terminal buds. The globular blooms possess excellent substance.

DARK PINK THOS. POCKETT

An amaranth pink with a silver white reverse. A sport from the variety Thos. W. Pockett and like it in every respect except color.

INDIANAPOLIS WHITE

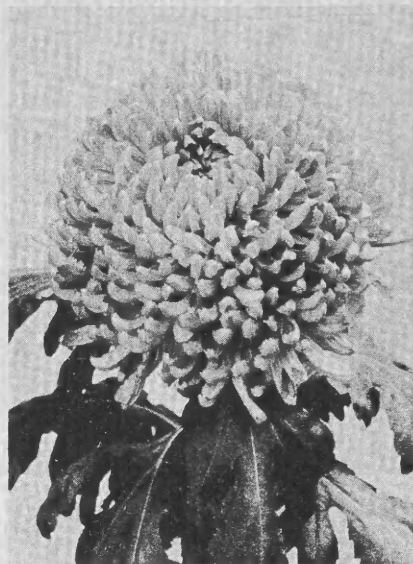

This clear white sport from Indianapolis Pink has all the foliage and growth qualities of the parent variety. An excellent habit and form for a white mum. This will undoubtedly be an exceedingly popular variety. A quality mum for November 10th flowering.

DARK PINK FREIDA

The striking color combination of its deep pink rays and the clear yellow anemone center make this an unusually distinctive flower. Because of its growth characteristics which are identical with those of its parent, Freida, this variety will no doubt surpass all others in this color class.

WHITE FREIDA

Clear white ray florets with a lemon yellow anemone center identical with that of its parent, variety Freida, make this an invaluable addition to the list of white anemones for both normal flowering and for shading purposes. In all respects except color this variety is identical with Freida.

ALAMEDA

RUSTIC

ALL VARIETIES LISTED ON THIS PAGE
\$2.50 per 10, \$15.00 per 100, \$125.00 per 1000

NOVELTY CHRYSANTHEMUMS

BRONZE FREIDA

Growth and foliage of this variety are the same as that of Freida. Flower color is a salmon buff with a light yellow overcast and a deep lemon yellow anemone center. This is a very practical variety for both normal flowering and for shading purposes.

RUSTIC

A small decorative anemone. Color is a scarlet tint of Brazil Red which does not fade as flowers age. Flowers about 2 inches in diameter. Matures November 25th. Growth habit is dwarf and free breaking. Well suited to pot culture. When last pinch is made about September 1-5 it will finish into a shapely plant. Stems are rigid enough to remain upright without staking.

VAGABOND

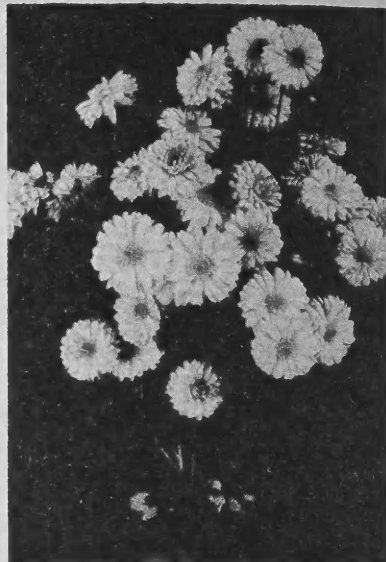

A pleasing apricot buff single. Flowers are about 2-2½" in diameter, with 4-5 rows of petals possessing fine substance. Blooms November 15th. Attains medium height from June 25 planting. Forms best spray from an August 5 pinch. Ships and keeps unusually well.

FLAMINGO

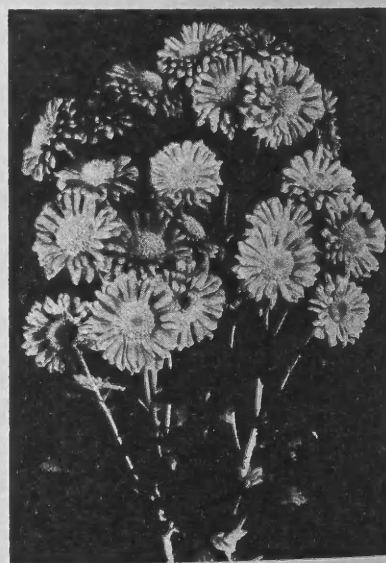

As the name implies, its color really flames. The hue is scarlet red enhanced by a yellow base. This 3" single possesses excellent substance and is easily grown to a medium height from June planting. An informal single with its five rows of petals twisting attractively holding their color unusually well. Matures November 20th and later to be easily had for a Thanksgiving cut.

AFTERGLOW

A small flowered rust bronze single. Flowers are 2-2½" in diameter with 6-8 rows of sturdy petals. Attains a medium height from June planting and forms a spray carrying a large head of flowers when last pinch is made about August 5th. Matures November 20. An attractive Thanksgiving variety.

VAGABOND

AFTERGLOW

ALL VARIETIES LISTED ON THIS PAGE
\$2.50 per 10, \$15.00 per 100, \$125.00 per 1000

NOVELTY CHRYSANTHEMUMS

SARONG

A beautiful single for mid-December to Christmas season. The color is a bright crimson scarlet. A heavy vigorous growth habit. Produces large well spread sprays on strong stems. This variety is best grown on raised benches; should be planted fairly early and receive a final pinch about August 1. When well grown this is one of the best red singles.

YUKON

A late clear white single. Flowers about 3" in diameter with 5-8 rows of petals. Matures about December 10th. A tall growing variety. Is well suited to ground bed culture and will produce a good yield of fine sprays from late planting and a final pinch about August 15th.

MASON'S RED

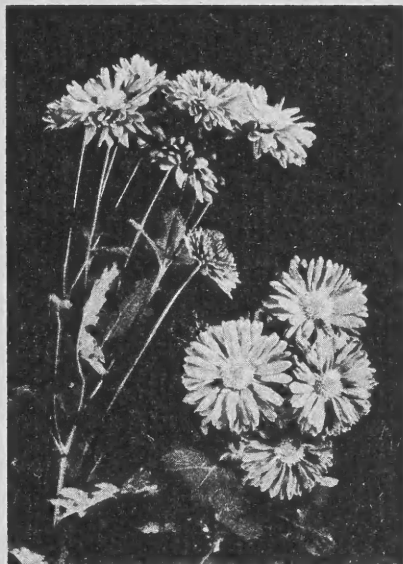

The color of this sport from variety Mason's Bronze is a true crimson with the base of the petal shading to an orange yellow. This variety we feel sure will be grown as extensively as its parent variety, which it resembles in all respects except color.

YELLOW ARCADIA

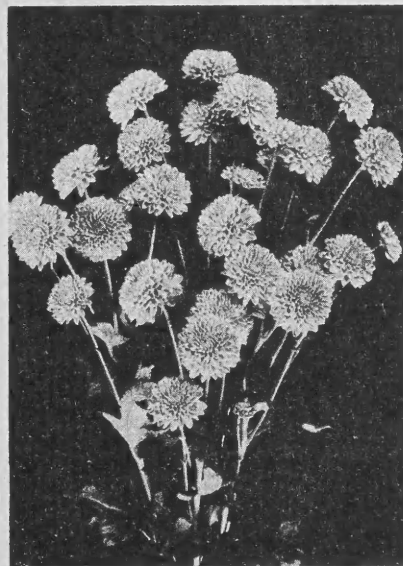

This sport from this well known variety will be a favorite with growers who have been looking for a good early yellow pompon. It is identical to Arcadia in every respect excepting in color which is a true pernet yellow. It has proven an excellent variety for shading maintaining its good color without fading. Its excellent form and its pleasing color make this variety very desirable. Matures normally October 25th.

APRICON

An intermediate, apricot yellow pompon possessing excellent form and substance. Matures November 25th on rigid stems of medium height when planted in late June and pinched about August 10. Flowers are 2" in diameter opening slowly to allow extension of blooming period. Production is good. Keeps, ships and bunches extremely well.

SARONG

APRICON

\$2.50 per 10, \$15.00 per 100, \$125.00 per 1000

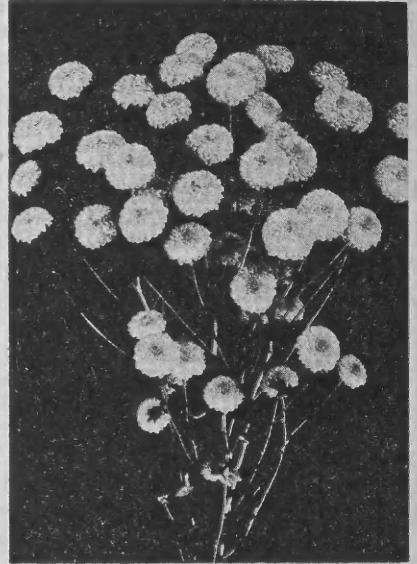

NOVELTY CHRYSANTHEMUMS

GOLDSMITH

A large golden yellow pompon of Decorative Princeton type flower. Flowers attain a diameter of $2\frac{1}{2}$ - $3\frac{1}{2}$ ". A very productive variety. Produces well formed sprays on strong stems of medium height when last pinch is made about August 1. An excellent variety to follow Princeton and bloom at Thanksgiving. Matures about November 20.

STARLET

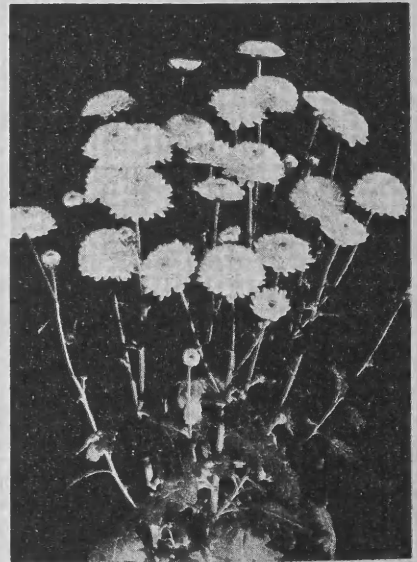

A small deep lemon yellow button type pompon. A wiry free breaking growth habit gives this variety good production of durable and attractive small flowers. Blooms about November 25th and should easily replace the variety Golden Sceptre as a yellow button pompon for Thanksgiving. Responds well to a late June planting and a final pinch about August 12.

STARLET

WINTERSET

An intermediate, lemon yellow pompon which blooms December 25. Attains a diameter of 2" and possesses good substance. Of medium height, from June planting with an August 5 pinch. Well suited to ground bed culture. Has a good growth habit. The latest of the yellow pompons.

WINTERSET

VIBRANT

A large decorative pompon. Matures about December 20th. Color is a brilliant deep lemon yellow. Flowers attain a diameter of about $2\frac{1}{2}$ "-3" when fully developed. A vigorous grower. Very productive. Well suited to either raised bench or ground bed culture. Does not come blind. Makes a fine spray from an August 5 pinch. An outstanding late yellow pompon.

Pompon and Decorative Commercial Varieties

The term pompon is applied to those varieties which are of the true rounded type, and those very nearly approaching this type.

Decorative varieties are those which are a distinct departure from the rounded type. Their flowers are less compact, partly reflexed and display more of the color of the inner side of the petals.

Size of flower is indicated by S—small; Int.—intermediate; L—large.

THE USE OF BLACK CLOTH SHADING TO ADVANCE THE FLOWERING SEASON

The varieties in the following list lend themselves satisfactorily to black cloth shading. The dates opposite the varieties are those found most satisfactory when the given blooming date is desired.

Use a good durable Black Cloth which has no less than 64x104 threads to the inch. Best results are obtained when the light intensity under the cloth when applied is 2 ft. candles or less. More light intensity than this will result in delayed flowering and unevenness in bloom.

The cloth should be applied at 5:00 P.M. and removed at 7 A.M. EASTERN STANDARD TIME. Shading is continued on pompons until the latest buds show color and most of the flowers are well developed. On the large flowering varieties shading can be discontinued after all flowering buds have attained the diameter of approximately half an inch.

Make sure that covering is complete on all benches shaded, as any leaks in light will cause uneven spots in the bench at flowering time.

It is not recommended that the large flowering varieties be grown outdoors under shade, unless proper protection is provided. Fall rains and wind storms play havoc with large flowers when not protected. Therefore, inside growing is suggested unless proper overhead protection is provided.

Best results are obtained when varieties of approximately the same blooming date are used for anyone particular shading. When a spread in blooming dates is desired, repeated shading of a few varieties at weekly or ten-day intervals has proven more satisfactory than grouping a large number of varieties into any one shading. The shading dates given are those which have been found to be best for the respective varieties.

Benching of rooted cuttings is satisfactory where bench space is available early enough. In such cases, the cuttings should be benched instead of flatted at approximately the date given for flatting or potting.

When only one branch is desired following a pinch, soft pinching should be practiced. Removal of the mere tip is best, for example, when standards are pinched to avoid crown buds. Thus the final pinch on standards should be a soft pinch.

When several breaks are desired as in pinching of pompons, the pinch should be low enough to remove all of the soft growth. The lowest point at which the stem breaks off readily is about right for this type of pinch.

For strong stems a single pinch is best. With more pinches plants become successively weaker.

For the pot plants, we recommend planting 3 cuttings directly from the propagating bench on the dates given. If these are spaced well, a better balanced plant will result than if planted together in the center of the pot.

As an added suggestion, we would recommend the removal of black cloth after night fall to allow for a better circulation of air. This would prevent the accumulation of dampness and the unfavorable results that usually occur therefrom. This of course will cause considerable extra work as the cloth must be replaced before morning. We feel however, that as this will improve the growth and the foliage it will be well worth the effort. Perfection is never obtained without added effort.

† - Good in Sprays or disbudded.

TO DELAY FLOWERING BY THE USE OF ARTIFICIAL LIGHT

For this purpose select the better mid season and late varieties and grow as you normally do.

All varieties should be planted the same time as when no lights are used.

Pinch all varieties late to avoid tendency for crown buds.

Light with 40 watt lamps using tin reflectors hung at intervals of five feet over the bench.

Obtain light intensity between 3 and 10 foot candles. 5 foot candle intensities are economical and effective. Your local lighting expert will explain these terms if you are not familiar with them.

Start lights no later than August 10th. Starting after this date may cause malformed flowers and long necks.

Turn lights on at dusk and continue lighting three hours every evening.

Treat each night until you have treated $\frac{3}{4}$ as many nights as you wish to delay flowering.

In other words treat for twenty days if you wish a thirty day delay in flowering.

Take the first bud showing after light treatment is stopped.

Pinch Pompons the last time 30 days before light treatment is discontinued.

Grow at a night temperature of not less than 50 degrees where possible, and consistent with local weather conditions.

Be careful that the lights from the bench treated does not light a bench nearby that is not treated. This will cause part of the bench not under treatment to be delayed in flowering and consequently upset growing plans for bench not under treatment.

Our interest in you and your crops by no means ends with the sale. We are more than anxious to have the materials sold you grow and prove profitable. For this reason we have inaugurated "Gloectner" suggestion service. If we are able to help you we shall be more than repaid.
